

Orinoco Flow - Sail Away Sail Away Sail Away

Continuum, is according to this report, a depository of ancient information data-flow conceived by black homo-sapiens on The Isles; and their values, and the reconstitution of the missing phenomenon and the entities previously lost in translation, for whatever reasons that caused it to happen in the first place. This new cache allows the primal data - flow to initiate a collection process from the jungle directly to The Isles unencumbered and unchanged, emboldened with the experiences from its raw close contacts from wild animals and nature. This ancient language, of the boat-people (Gaelic) in its substrate form, for the first time has been discovered, that up to now has been embalmed in the resin of trees or in today's parlance: corrupted. This new opportunity collapses the barriers between primitive man and animal, when living together under the same skies, and how their words were crafted doing their business of survivorship with cruel nature. Repairing the existing algorithms and amending the free data flow makes possible a reconnection that empowers humanity once more, and allows new stories to be told, discovery of landscapes, mindsets and history; and all in the name of progress, on The Isles and USA.

The narrative of how this new information eluded mankind has many conspiracies that must now be noted and confined to history, and in its place be allowed to distil as data into information of a new free-flow market for a better informed intelligence, to process into a knowledge that empowers and creates wisdom so our leaders can make better decisions.

Failure of history to record the ancient data flow up to now, may have been caused by the rapid changing world in their respective periods, and society then suffered in war and confrontation and created racism as a result. For democracy to prevail in the future, politics must move faster than technology. This is the importance of why updating real data in real time to make real decisions matters today. The future paradigm will be seen between the political global data process system and the evolution of technology that leads to a more efficient data - processing system, called the Internet for Everything or Ooor; had the monkey had its say when fleeing the eagle. After that, homo-sapiens, in the form of human experiences, intelligence and being sacred, will disappear, and merge with the cosmos galaxy as in 'the kingdom of the heavens' (Matthew 3:2) and become a chip inside the Ooor that no one understands and tooling away at what is now referred to as programming.

Unrecorded stories from the past are an integral part of the future of mankind and must be absorbed into an algorithm to increase its efficiency that will lead to a superior quality of life. When black homo-sapiens left west Africa on the Gaal boat, that was then their image of their power house of their best technology and superior to everything they had invented before, it allowed them to do everything and to go everywhere and they learned to merge

into this new boating phenomenon that changed their lifestyles forever. Raising a sail on their boat from input data learned from the monkey and the large wing span of the eagle increased the speed of their water technology that today in Ireland is called the hooker boat or Oor. This mighty creation increased their wellbeing and their power and enabled their tribes become successful doing what they know best. Subsequently, the need to understand how the hooker achieved its power game became less important, and what only mattered was how to use and operate it, that is termed today as programming. In this case the function of getting from A to B and why.

Today, the understanding of everything about the hooker boat does not surpass the intelligence of mankind and neither does it decouple from human consciousness. If this is the reality of today, then, the probability of the future, with new and superior technology, in good time will show the same result.
